

LAB SHEET – 2

BASIC FLUTTER WIDGETS AND USER INTERFACE DESIGN

AIM: To understand and implement basic Flutter widgets for designing simple mobile application user interfaces.

PROGRAMS :

1. Create a Flutter application to display a “Hello Flutter” message on the screen.
2. Create a Flutter application to display your name, course, semester, and college name using Text widgets.
3. Create a Flutter application to demonstrate different text styles such as bold, italic, different font sizes, and text alignment.
4. Create a Flutter application to display an image using the Image widget.
5. Create a Flutter application to display different icons using the Icon widget.
6. Create a Flutter application containing Text, Image, and Icon widgets on the same screen.
7. Create a Flutter application using the Container widget and customize its height, width, padding, margin, and decoration.
8. Create a Flutter application to display multiple Text widgets horizontally using the Row widget.
9. Create a Flutter application to display multiple Text widgets vertically using the Column widget.
10. Create a Flutter application containing three buttons: Submit, Reset, and Cancel.
11. Create a Flutter application to design a simple student profile card using Container, Text, Image, and Icon widgets.
12. Create a Flutter application to design a simple business card containing name, phone number, email, and profile image.
13. Create a Flutter application to design a simple login screen using Text, TextField, Button, and Image widgets.
14. Create a Flutter application to design a simple registration screen containing name, email, password, and a registration button.

15. Create a Flutter application to design a simple college home screen containing college name, logo, and menu options.
16. Create a Flutter application to display multiple products using Container and Card widgets.
17. Create a Flutter application using the Card widget to display student information such as name, roll number, course, and semester.
18. Create a Flutter application to demonstrate the use of Padding and Margin for arranging UI elements properly.
19. Create a Flutter application to demonstrate different alignment options using Center and Align widgets.
20. Create a Flutter application to design a simple food menu screen using images, text, icons, and buttons.
21. Create a Flutter application to design a simple calculator interface using buttons and basic layout widgets.
22. Create a Flutter application to design a simple weather information screen containing location, temperature, weather icon, and other information.
23. Create a Flutter application to design a simple shopping product screen using Image, Text, Icon, Card, and Button widgets.
24. Create a Flutter application to design a simple student dashboard containing profile information and different menu cards.
25. Create a Flutter application to design a personal profile/home screen by combining Text, Image, Icon, Container, Row, Column, Card, and Button widgets.
