

LAB SHEET – 3

Flutter User Input and Basic Interaction

AIM:

To understand and implement user input, buttons, basic interaction, and simple dynamic UI in Flutter.

PROGRAMS:

1. Create a Flutter application to accept a student's name using a TextField and display it on the screen.
2. Create a Flutter application to accept two numbers using TextField and display their sum.
3. Create a Flutter application to accept two numbers and perform addition, subtraction, multiplication, and division using buttons.
4. Create a Flutter application with a button that changes the displayed text when pressed.
5. Create a Flutter application with an ElevatedButton that displays a message using SnackBar.
6. Create a Flutter application with Submit and Reset buttons for a simple form.
7. Create a Flutter application to accept a student's name and marks in three subjects and display the total marks.
8. Create a Flutter application to calculate percentage from three subject marks entered by the user.
9. Create a Flutter application to check whether a number entered by the user is even or odd.
10. Create a Flutter application to check whether a number entered by the user is positive, negative, or zero.
11. Create a Flutter application to convert Celsius temperature into Fahrenheit using user input.
12. Create a Flutter application to calculate the area of a rectangle using length and width entered by the user.
13. Create a Flutter application to calculate BMI using height and weight entered by the user.

14. Create a Flutter application with a Checkbox to select whether the user agrees to the terms and conditions.
15. Create a Flutter application using Radio buttons to select the student's gender.
16. Create a Flutter application using Radio buttons to select a course from three options.
17. Create a Flutter application using a DropdownButton to select a semester.
18. Create a Flutter application using a DropdownButton to select a department.
19. Create a Flutter application using a Switch to turn a setting ON and OFF.
20. Create a Flutter application containing Checkbox, Radio, DropdownButton, and Switch widgets.
21. Create a Flutter Login Form UI with username, password, Login button, and Reset button.
22. Create a Flutter Registration Form UI with name, email, password, gender, course, and Register button.
23. Create a Flutter Student Feedback Form with name, rating options, feedback field, and Submit button.
24. Create a Flutter Simple Calculator that accepts two numbers and performs operations using buttons.
25. Develop a Student Result Application in Flutter that accepts student name and marks in three subjects, calculates total and percentage, and displays Pass/Fail.
