

LAB SHEET – 4

FLUTTER NAVIGATION AND MULTI-SCREEN APPLICATIONS

AIM:

To understand and implement screen navigation, multiple screens, and basic data passing between screens in Flutter.

PROGRAMS:

1. Create a Flutter application with two screens and navigate from the first screen to the second screen using an ElevatedButton.
2. Create a Flutter application with Home Screen and About Screen and navigate between them using a button.
3. Create a Flutter application with three screens: Home, Profile, and Settings, and navigate between the screens.
4. Create a Flutter application to navigate from a Login Screen to a Home Screen when the Login button is pressed.
5. Create a Flutter application with a Home Screen containing a button that opens a separate Profile Screen.
6. Create a Flutter application to navigate to a new screen using Navigator.push().
7. Create a Flutter application to return from the second screen to the first screen using Navigator.pop().
8. Create a Flutter application with a Home Screen and a Detail Screen and implement forward and backward navigation.
9. Create a Flutter application containing a BottomNavigationBar with Home, Profile, and Settings screens.
10. Create a Flutter application using BottomNavigationBar to switch between three different screens.
11. Create a Flutter application with a simple home screen and a drawer containing Home, Profile, About, and Settings options.
12. Create a Flutter application to open different screens using options provided in a Navigation Drawer.

13. Create a Flutter application with an AppBar and navigation drawer containing icons and text for different menu items.
14. Create a Flutter application with Home, Courses, and Contact screens and navigate between them using a BottomNavigationBar.
15. Create a Flutter application with a Home Screen containing buttons for Student Profile, Attendance, and Result screens.
16. Create a Flutter application to pass a student's name from one screen to another screen and display it on the second screen.
17. Create a Flutter application to pass a student's name and course from the first screen to the second screen.
18. Create a Flutter application with a form that accepts a student's name and displays the entered name on a new screen after pressing the Submit button.
19. Create a Flutter application to pass two numbers from one screen to another and display their sum on the second screen.
20. Create a Flutter application with a Home Screen and Product Detail Screen. Pass the product name and price to the Product Detail Screen.
21. Create a Flutter application with a Student List Screen and Student Detail Screen. Display the selected student's information on the detail screen.
22. Create a Flutter application with a Login Screen, Home Screen, and Profile Screen and implement navigation between them.
23. Create a Flutter application for a simple college app containing Home, Courses, Faculty, and Contact screens using navigation.
24. Create a Flutter application for a simple shopping app containing Home, Products, Cart, and Profile screens using BottomNavigationBar or Navigation Drawer.
25. Develop a Student Management Application in Flutter containing Home, Student Profile, Attendance, and Result screens. Implement navigation between all screens and display basic student information on the respective screens.
