

LAB SHEET – 5

FLUTTER LISTS, GRIDS AND DYNAMIC USER INTERFACE

AIM: To understand and implement scrollable lists, grid layouts, and dynamic UI updates using StatefulWidget and setState() in Flutter.

PROGRAMS:

1. Create a Flutter application to display a list of five items using ListView.
2. Create a Flutter application to display a list of items with a leading icon, title, and subtitle using ListTile.
3. Create a Flutter application to display the numbers from 1 to 100 using ListView.builder.
4. Create a Flutter application to display a list of names stored in a Dart List using ListView.builder.
5. Create a Flutter application to display a list of items separated by dividers using ListView.separated.
6. Create a Flutter application to display a horizontally scrolling list using the scrollDirection property.
7. Create a Flutter application to display a grid of icons using GridView.count.
8. Create a Flutter application to display a grid of colored boxes using GridView.builder.
9. Create a Flutter application to display a list of products (name and price) using a Dart model class and ListView.builder.
10. Create a Flutter application to demonstrate the difference between StatelessWidget and StatefulWidget.
11. Create a Flutter application with a counter that increases when a button is pressed using setState().
12. Create a Flutter application with Increment, Decrement, and Reset buttons for a counter.
13. Create a Flutter application to add a new item to a list using a TextField and a button.
14. Create a Flutter application to delete an item from a list when the user taps the delete icon.
15. Create a Flutter application to remove list items by swiping them using the Dismissible widget.
16. Create a Flutter application to filter a list of names using a search TextField.

17. Develop a Student Record List Application in Flutter that allows the user to add a student (name, roll number, and course), displays all students in a list, supports searching by name, and allows deleting a student.
